

AVYUHA

Product Knowledge Base for RAG Practice

A parent technology brand bringing together human connection, anonymous expression and accessible digital commerce.

01 MUTUALDREAMERS	02 RANDOM CONFESSION
Dream sharing and meaningful connection	A safer space for honest expression
03 AVYUHA SAAS	PARENT BRAND ROLE
Digital tools for micro and small businesses	Shared vision, identity and technology

BRAND IDEA

Like a parent technology company, AVYUHA provides the common purpose, standards and foundation under which independent products can grow. Each product solves a different human or business problem while sharing one long-term ambition: to build useful, inclusive and responsible digital experiences.

Prepared only as sample source material for learning and testing Retrieval-Augmented Generation (RAG).

MutualDreamers

A social dimension where dreams can be remembered, expressed and connected.

WHAT IT IS

MutualDreamers is an AVYUHA social product for sharing dreams through text and voice, discovering people with similar dream experiences and discussing the emotions or ideas behind them. Instead of treating a dream as a temporary private memory, the platform turns it into a story that can create curiosity, creativity and human connection.

Why MutualDreamers?

Most dreams disappear soon after waking, even though they can contain strong emotions, imagination and personal meaning. Existing social platforms are built mainly around real-life photos, achievements and public identity. MutualDreamers creates a dedicated space for the inner experiences people usually cannot show.

The value to users

Users can preserve dream memories, feel less alone after unusual experiences, discover a possible 'dream twin,' explore recurring themes and turn imagination into conversations, art or AI-assisted visual concepts.

CORE EXPERIENCE

- Create text or voice dream posts with a title, description and optional theme.
- Explore a dream feed; like, comment and use reactions such as 'I felt this too.'
- Build a Dreamer profile with a display name, Dreamer ID, country and activity.
- Discover similar dreams or 'dream twins' through semantic matching.
- Use future AI features for summaries, themes, safe recommendations and dream visualization.

PEOPLE, SAFETY AND RAG PRACTICE

Development team	Responsible product direction	RAG questions this page can answer
Sujith Sai Charan Reddy Varshitha Shivani	Users control their posts. Sensitive dream content should have reporting, moderation and privacy choices. AI interpretations must be presented as creative reflection, not medical or psychological diagnosis.	What is MutualDreamers? Why does it exist? Who develops it? What can users share? What safety limits apply?

Random Confession

Honest stories without the pressure of presenting a perfect life.

PRODUCT CONCEPT

Random Confession is an AVYUHA community product where people can express personal truths, opinions and lived experiences. A confession may come from a student, IT professional, homemaker, entrepreneur, job seeker or anyone who needs a place to speak honestly. Topics may include daily life, work pressure, family experiences, mistakes, achievements, love, attraction, desire, regret, fear, loneliness, identity or an opinion that feels difficult to share elsewhere.

Life and experience

Personal memories, lessons, failures, growth, family situations and everyday moments.

Work and society

IT-job experiences, office culture, career pressure, education, money and social expectations.

Feelings and relationships

Love, attraction, desire, friendship, rejection, loneliness, guilt and unspoken thoughts.

POSSIBLE PRODUCT FEATURES

- Anonymous or named posting, with category, language and sensitivity labels.
- Text and optional voice confession formats; drafts and scheduled deletion.
- Supportive reactions and comments designed to reduce judgement and harassment.
- Topic discovery, search, moderation queues and user-controlled blocking/reporting.
- AI assistance for language translation, safe summaries, topic tagging and harmful-content detection.

NON-NEGOTIABLE SAFETY BOUNDARIES

Privacy	Community safety	Responsible AI
Do not expose identity, location or private contact information. Give users control over visibility and deletion.	Prohibit threats, harassment, exploitation, non-consensual intimate content, hate, doxxing and instructions for wrongdoing. Provide reporting and escalation paths.	RAG answers must rely on approved policies and product documents. The assistant should not diagnose users or replace professional crisis, legal or medical support.

RAG PRACTICE USE

This product can support a policy-grounded RAG assistant that explains posting rules, privacy controls, categories, reporting steps and community standards. It should cite the relevant policy section and admit when the knowledge base does not contain an answer.

AVYUHA SaaS for Small Business

A configurable digital-business platform for micro and small enterprises in India and across global markets.

THE BUSINESS PROBLEM

Many small businesses rely on social media, spreadsheets and messaging apps but lack an affordable, unified system for their website, catalogue, customers and daily operations. AVYUHA SaaS is designed as a multi-tenant platform: each business receives its own workspace, brand settings, catalogue and dashboard while sharing one secure software foundation.

Major product modules

Business registration and onboarding; template-based website/storefront; custom subdomain or connected domain; product catalogue; inventory; orders and payments; customer records; owner/staff dashboards; reports; promotions; multilingual content; support and subscription management.

Minor but important controls

Variants such as size and colour; SKU and barcode; taxes and invoices; opening hours; branches; delivery zones; pickup; low-stock alerts; image management; coupons; returns; staff permissions; audit history; exports; backups; notifications; accessibility and mobile responsiveness.

BUSINESSES AND PRODUCTS SUPPORTED

Food and daily needs	Fashion and lifestyle	Home and specialist retail
Cafes, bakeries, restaurants, groceries, farms, packaged foods and beverage sellers.	Clothing, footwear, jewellery, cosmetics, handicrafts, gifts, books and sports goods.	Furniture, electronics, hardware, auto parts, stationery, pet products, medical retail where legally permitted, and other lawful physical or digital goods.

SAAS OPERATING MODEL AND RAG USE

Platform model	Future AI and RAG	
Businesses choose a plan and template, add their identity and products, assign staff roles and publish. AVYUHA manages shared updates, security and infrastructure. Revenue can come from monthly/annual plans, premium templates, domain setup, add-ons, transaction services and optional managed support.	A tenant-aware RAG assistant can answer each owner's questions using only that business's catalogue, policies and operating documents. Future uses include product discovery, onboarding help, stock guidance, sales summaries and multilingual customer support, with strict access control between tenants.
